

The **FKO** (Flare Knock-Out) - Heated provides worry free aboveground storage for all applications when keeping the product above freezing temperature is important.

FKO-H

Double wall construction and 110% secondary containment ensures maximum risk management for virtually any liquid without requiring additional diking.

FR-F / FR-D

For safe and secure underground storage of liquids, NSI's Fibreglass jacketed steel tanks (FR-Flare &/or FR-Drain) meet or exceed all G-55, ULC and UL criteria.

These tanks' unique design of a strong steel primary tank, enclosed within a 360 degree Fibreglass Re-enforced Plastic secondary containment jacket. This FRP secondary makes this already superior tank double wall with a monitorable interstitial space.

These tanks offer Flare Knock-Out, Condensate and just about any kind of storage designs. These tanks come in both standard and custom sizes from 30 BBL to 625 BBL. Primary Epoxy or FRP coatings available upon request.

Northern Steel is a leader in the manufacturing industry. We provide complete, environmentally friendly products to our customers that are engineered to meet the most demanding needs. We provide a comprehensive line of products that include horizontal, vertical, rectangular, and underground tanks that will meet all of your application needs. We can custom design and build tanks as required. Northern Steel tanks are designed and manufactured to UL and ULC specifications. Northern Steel provides all types of accessories that are designed to fully compliment our variety of products. From service to sales, our employees are committed to providing our customers with quality products that stand the test of time.

The **VSW** (Vertical Single Wall) above ground storage tank provides versatile and economical storage. The vertical design provides cost effective storage capacity which includes a list of available options that enable the VSW to be customized specifically for your individual needs.

VSW

V S W

The **VEPT** (Vertical Environmental Protection Tank) from Northern Steel provides convenient above ground storage for smaller volume applications. The double wall construction ensures maximum risk management for virtually any liquid. Secondary containment has 110% capacity of the primary tank and is continuously vented to the atmosphere.

VEPT

The VEPT's innovative vertical design uses less ground area while offering easy accessibility. For added versatility, Northern Steel, offers a variety of customized options including stairs, pumping platform, pumps and cabinets, overfill protection, remote top filling, factory supplied piping and interior linings for a variety of liquids.

Northern Steel's API-12F Shop Fabricated vertical storage tanks provide versatile, economical storage solutions. These tanks may be used individually, or may be tied together in batteries depending on the specific site requirements.

V E P T

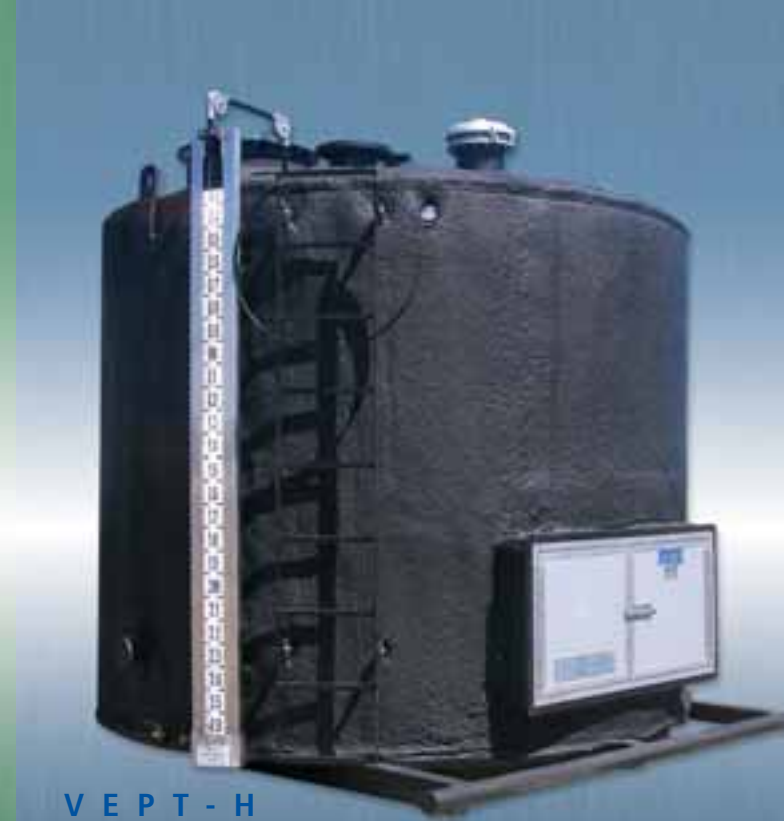

The **VEPT-H** (Vertical Environmental Protection Tank - Heated) from Northern Steel provides worry free aboveground storage for all applications when keeping the product above freezing temperature is important.

VEPT-H

The double wall construction ensures maximum risk management for virtually any liquid. The 110% secondary containment meets all regulatory guidelines and does not require any additional diking.

The VEPT-H comes in standard and custom sizes. Contact your sales representative for sizing.

The VEPT-H's innovative vertical design uses less ground area while offering easy accessibility.
